Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to an adsorbent material, classified in class 502, subclass 74.
- II. Claims 7-13, drawn to a method for making a coated zeolite, classified in class 502, subclass 74.
- III. Claims 14-19 and 24-32, drawn to a method for removing arsenic from water, classified in class 210, subclass 668.
- IV. Claims 20-23 and 33-37, drawn to a filtration unit, classified in class 210, subclass 284.

The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of group I could be made by another process, different from that of group II. For example, since the adsorbent material of Group I is not limited to a zeolite coated with nanophase Mn-

Fe oxide, as evidenced by claims 1, 2 and 6, this material could

Art Unit: 1724

be made without the use of zeolite, as required by the process of Group II.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group I could be used in another process, different from that of Group III. For example, this material could be used as a water softener, as a catalyst, or as a desiccant.

Inventions III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus of Group IV could be used in another process, different from that of Group III. For example, this device could be used in water softening, catalytic or fluid drying operations.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by

Page 4

Serial Number: 09/911,021

Art Unit: 1724

their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Furthermore, if the invention of Group I, III or V is elected, then an election of species is also required. This application contains claims directed to the following patentably distinct adsorbent material species of the claimed invention:

(1) Fe and Mn oxides (e.g. Mn-ferrihydrite, Si-ferrihydrite, Si-free birnessite, Si-birnessite, zeolite coated with nanophase Mn-Fe oxides, etc.).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed adsorbent material species to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6, 24-26, 28 and 30-37 appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An

Art Unit: 1724

argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should Applicant traverse on the ground that the species are not patentably distinct, Applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to I. Cintins whose telephone number is (703) 308-3840. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM.

Art Unit: 1724

The fax phone numbers for this art unit are: (703) 872-9311 for "Official" faxes after Final Rejection; (703) 872-9310 for all other "Official" faxes; and (703) 872-9492 for "Draft" and other "Unofficial" faxes.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
